

For optimized management of your energy resources distribution!

Is the integration and analysis of your transaction data user friendly enough for you to:

- enhance the efficiency of record keeping,
- reduce potential loss and operating costs,
- find out volume transactions in real time,
- optimize access to facilities through greater control,
- increase client satisfaction?

Kameleon® yields real results by:

- ensuring better control of transactions,
- ensuring fast reconciliation of inventory with management system data (three simultaneous levels),
- Comparison of products transactions in the channel of distribution (from bulk plant to delivery),
- reporting rapidly discrepancies in volume reconciliation,
- ensuring sites run independently and 24/7 access,
- providing loading authorization management, according to volume or amount limits.

Inventory status

Transaction report

Its main functionalities integrate:

- Control of access to petroleum terminals and your facilities;
- Automation and retrieval of transactions;
- Exportation of transactions to your financial system;
- Allows fast diagnosis of anomalies such as faulty calibration;
- Supervision of loading and unloading, along with tank management;
- Possible use of several products on the same electronic register;
- Management of product mixing;
- Management of customer, carrier and driver data;
- Information provided on the volu of products contained in trucks.
