

Kameleon™ – Bulk Delivery

Meeting real world needs through
compatibility with existing equipment!

Kameleon™ follows your fuel deliveries every step of the way

Follow-up is the key to success. **Kameleon™** allows you to monitor your inventory from your reservoirs through to the final destination, ensuring perfect balance every step of the way. **Keep your fuel tanks balanced... and your accounts are in order!**

AT THE OFFICE

In the morning

- The **Kameleon™** management system helps prepare routes and truck assignments
- The system transmits accurate and complete information to each truck's **Kameleon DC** device

During the day

- Transactions are monitored truck by truck
- The system updates data for each truck by transmitting client information (price, discounts, taxes etc.), and receiving transaction details
- **Kameleon DC** allows constant monitoring of inventory and verification of gains and losses
- The management system contains information from all mobile Kameleon DC devices, allowing it to carry out analysis and verification, and to balance your inventory
- The system ensures precision and accuracy. No information is either lost or left vague. Say goodbye to mistakes and headaches

Whenever an order is received during the day

- The **Kameleon™** management system identifies which truck is in the best position to respond to the order
- Updated client information is transmitted to the selected truck's **Kameleon DC**. Following the delivery, a bill is sent out containing all transaction information

Even more

- The system allows for manual input and correction of all data
- A special tool allows work shift information to be verified and corrected before the data is sent to billing
- A graphical tool balances inventory for each product/truck
- A delivery schedule tool (degrees-day, on call, fixed intervals) is also available, along with an easy to use route assignment component

IN THE TRUCK

In the morning

- The driver enters a personal access code into the truck's mobile **Kameleon DC** and receives detailed information about the day's schedule:
 - A list of customers, grouped by route
 - Suggested delivery order
- Complete client information (address, GPS location, location of reservoirs, product, amount to be delivered, price, taxes, discounts etc.)

IN THE TRUCK

Throughout the day

- **Kameleon DC** oversees operations ensuring all delivery information is sent to the electronic register: product selection, delivery location, predetermined amount etc.
- **Kameleon DC** prints out delivery records with complete customer information (delivery and billing)
- **Kameleon DC** allows the recording of payments
- All of the day's transactions are recorded
 - Bulk loading at the plant
 - Delivery to customer
 - Product transformation
 - Product returned to the plant
- **Kameleon DC** can exchange information with the office **Kameleon™** management system either at any time using cellular service, or at regular intervals such as when the truck is in a wi-fi accessible area

Kameleon DC is compatible with your equipment, allowing it to work with your existing system instead of replacing it

Kameleon DC is compatible with existing LC3, LCR, EMR3 and other equipment. You will not have to replace any of the material you use now: it adds planning, management and control functions speeding up your return on investment. It also integrates fully into the Kameleon bulk loading system!

Kameleon DC makes the Kameleon™ software suite complete!

Also, **Kameleon™** can be specially adapted to be fully integrated into your financial system. Any of the following elements can be added to the main architecture of the system:

- **Kameleon Bulk Plant (KRC)**
Controls loading position. Provides secure access to products and site.
Prints bills of lading
- **Kameleon Inventory balancing**
Allows total monitoring of inventory by integrating transactions from the loading positions, from the commercial service stations, and from the delivery trucks
- **Kameleon Commercial supply**
Integrates management of your commercial sites, allowing total monitoring of inventory

ABOUT KAMELEON™

The **Kameleon DC** mobile and software systems are specialized products designed by **Genisys** to help energy resource distribution companies optimize activities and control production costs.

ABOUT GENISYS

Genisys is an industry leader in the combined fields of automation and industrial data processing. Using practical solutions, the company optimizes productivity and data exchange between management and operations. These solutions can also indirectly improve environmental performance for some operations. The company uses an approach that takes the competitive challenges and concerns into account at all times. **Genisys** and its **Kameleon™** solution provide synergistic and applied know-how to give customers a competitive edge.
